SUMMARY

Mobile Developer with extensive experience in iOS, Kotlin, React Native, React.js, and Node.js. Proven track record in building cross-platform mobile applications and scalable web solutions. Expert at integrating Azure Cloud services (Functions, App Services, AD) and managing the full SDLC, from requirement gathering with business stakeholders to production support and iOS/Android deployment.

EDUCATION

California State University Fullerton

M.S. in Computer Science - Mobile Development, Machine Learning and Database Management

Jan 2024 – Dec 2025

Fullerton, CA

EXPERIENCE

iOS Software Engineer

Jun 2024 – Dec 2024

Turing | SwiftUI, Objective C, MacOS, VisionOS

Fullerton, CA

- Engineered a scalable, modular component architecture by refactoring legacy code into object-oriented patterns, which reduced technical debt and accelerated future feature development time by 25%
- Owned the end-to-end design of data-driven RESTful services, optimizing API response times by 2ms and ensuring seamless handling of high-volume traffic loads during peak usage.
- Migrated some complex user interfaces from UIKit to SwiftUI, leveraging the Combine framework for reactive state management to improve rendering performance and significantly reduce view-layer boilerplate.
- Migrated legacy polling mechanisms to MQTT protocol for real-time inventory updates, reducing network overhead by 40% and significantly improving battery efficiency for end-users.
- Architected automated testing frameworks for critical software components, enforcing strict quality gates.

React Native Mobile Developer

Sep 2022 – Nov 2023

Atliq Technologies Inc. | iOS/Android, Agile, Jetpack Compose

Vadodara, GJ

- Designed a custom real-time data synchronization engine to handle complex backend-to-mobile updates, ensuring 99.9% data consistency across devices even in low-latency environments.
- Secured sensitive user credentials and private keys using Android Keychain Services and implemented strict API Key management policies which reduced errors by 45% to prevent unauthorized access.
- Developed custom native Android modules using Kotlin to handle resource-intensive background tasks, effectively bypassing the React Native JavaScript bridge to optimize app performance on lower-end Android devices.
- Architected an offline-first capability using local persistence (SQLite) to queue user actions during network outages, automatically synchronizing data once connectivity is restored.

PROJECTS

Vibranium | *Swift, Microsoft SQL Server, Flask* [Link](#)

Sep 2025 – Dec 2025

- Designed and implemented a secure, full-featured cryptocurrency wallet application for iOS using SwiftUI, managing user authentication, secure data storage, and transactional flows with MVVM.
- Implemented a high-performance market analytics engine capable of tracking and rendering price history for 4 major cryptocurrencies.
- Developed and integrated an AI conversational assistant (Bitbot) that analyzes simulated 30-day price trends to deliver instant, actionable market advice.

PawPrinter PetCare iOS Mobile App | *iOS, Apple Cloud SDK, Firebase, TestFlight*

March 2026 – June 2026

- Native and Firebase (Auth, Firestore, Storage, Functions), supporting three role-based experiences — pet owners, veterinarians, and admins — with pet tracking, vet appointment booking, in-app messaging, and invite-code co-ownership.
- Designed Firebase Firestore security rules and App Check for per-role access control, vet verification workflows, and immutable medical-note audit logs; migrated production from Spark to Blaze with budget alerts after hitting free-tier quota.

GituU – AI/Human Code Detection Tool | *SwiftUI, Firebase, GitHub API, iOS Concurrency* [Link](#)

Nov 2025 – Jan 2026

- Engineered an iOS application that fetches and analyzes GitHub repository data to distinguish between AI and human-written code, leveraging Swift Concurrency to reduce execution time for parallel data processing by 20%.
- Integrated a cloud backend using Firebase Firestore and Auth to manage user preferences and real-time repository flagging, ensuring data persistence and high availability across user sessions.
- Architected a robust networking layer with built-in Rate Limiting and error handling for the GitHub REST API, ensuring stable performance during high-volume data fetching and complex code analysis.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL (Postgres), C#, .Net, JavaScript/TypeScript, HTML/CSS, R.

Frameworks: React, Node.js, Flask, JUnit, WordPress, WebForms, RestfulAPI, GraphQL.

Developer Tools: Git, CLI Tools, PowerBI, Alteryx, Colab, Google Cloud Platform, VS Code, Visual Studio, JSON, IntelliJ, Eclipse, Expo SDK, Apple Developer Program.

Libraries: ReactNative, pandas, NumPy, Pytorch, PySpark Matplotlib.
